Booking Link: https://app.medall.org/events/8b16353e-a375-4aad-8cac-d9c99c4f75e7

Sim centre, part-task, small group teaching to maximise learning and practice.

* Max 14 places per half day *

Programme

Registration

1hr - Vascular US: scan live models & practice on ballistic gel models
- Venous cannulation

30 mins - Advanced Lines:
- Arterial lines
- PICC & CVL

Break

1 hour - Lung US Intro - theory and practice

30 mins - Focused Cardiac Echo Intro: Effusion / tamponade, Volume Status +/- Function

The primary focus of this half-day course is to equip you with the knowledge and skills to undertaken ultra-sound guided venous cannulation of infants and children.

Our intention is to enable you to begin using ultrasound in your day-to-day beside practice when cannulating infants and children.

In addition, we will demonstrate arterial, PICC and central line insertion and provide you with the opportunity to try some of these procedures whilst building on your ultrasounds handling skills, if you wish.

Finally, we will deliver a session on chest and lung bedside ultrasound assessment, and an introductory overview of focused echocardiogram assessment. These later topics will set you up well for considering more detailed courses to further develop these skills and knowledge later on if you wish.
